## [Simple Preflight And Sanity Checking In Scripts](#)

The `react-scripts` package provided by Create React App requires a dependency:

```
"webpack-dev-server": "3.2.1"
```

Don't try to install it manually: your package manager does it automatically.  
However, a different version of `webpack-dev-server` was detected higher up in the tree:

```
C:\xampp\htdocs\reactx-reactjs-admin-template\node_modules\webpack-dev-server (version: 3.9.0)
```

Manually installing incompatible versions is known to cause hard-to-debug issues.

If you would prefer to ignore this check, add `SKIP_PREFLIGHT_CHECK=true` to an `.env` file in your project.  
That will permanently disable this message but you might encounter other issues.

To fix the dependency tree, try following the steps below in the exact order:

1. Delete `package-lock.json` (not `package.json`!) and/or `yarn.lock` in your project folder.
2. Delete `node_modules` in your project folder.
3. Remove `"webpack-dev-server"` from `dependencies` and/or `devDependencies` in the `package.json` file in your project folder.
4. Run `npm install` or `yarn`, depending on the package manager you use.

In most cases, this should be enough to fix the problem.

If this has not helped, there are a few other things you can try:

5. If you used `npm`, install `yarn` (<http://yarnpkg.com/>) and repeat the above steps with it instead.  
This may help because `npm` has known issues with package hoisting which may get resolved in future versions.
6. Check if `C:\xampp\htdocs\reactx-reactjs-admin-template\node_modules\webpack-dev-server` is outside your project directory.  
For example, you might have accidentally installed something in your home folder.
7. Try running `npm ls webpack-dev-server` in your project folder.  
This will tell you which `other` package (apart from the expected `react-scripts`) installed `webpack-dev-server`.

If nothing else helps, add `SKIP_PREFLIGHT_CHECK=true` to an `.env` file in your project.  
That would permanently disable this preflight check in case you want to proceed anyway.

P.S. We know this message is long but please read the steps above :-). We hope you find them helpful!

```
error Command failed with exit code 1.
